GAMES PORTFOLIO

Download counts from Google Play, November 2026. Projects listed newest first.

PAMPAM STUDIO · 2018 – 2026

Hyper-casual, hybrid-casual and midcore mobile games; location-based VR attractions.

Survivors-like F2P game (NDA)

Unity client & backend developer

Survivors-like action, F2P, soft launch | WebGL, Android | Jul – Nov 2026

- Unity client: moved the game from a mock local API to the server; generated C# contract types, command queue, snapshots with revision-conflict retry, session refresh, maintenance notices, platform SSO and payments.
- Authoritative server on NestJS, TypeORM and PostgreSQL: economy, energy, missions, shop and offers, purchases, Battle Pass, remote config and feature gates; 51 modules, 121 OpenAPI operations, ~2,250 unit and 195 integration tests.
- Performance: database queries per request cut for bootstrap 63 → 13, mission result 150–200 → 11–14, Battle Pass claim 33 → 8; cold start 6–25 s → 3.4–5.3 s; load test of 600 heavy players at 106 req/s on 4 instances.
- Docker images on Cloudflare Workers + Containers across up to 7 environments; OpenTelemetry metrics and SLO alerts; admin API and panel (sole developer); scaled GA4 analytics delivery 6.6 → 41.7 events/s.
- Sole backend developer. Spec-driven development (SDD): I owned architecture, specs, review and testing; implementation by Claude Code agents.

Hit Master 3D · 100M+ downloads

LiveOps, sole developer

Hyper-casual action | Android, iOS | Oct 2025 – Jun 2026

- Practically the only developer on the project in this period; shipped Android versions 1.9 → 1.23 and an iOS release.
- Casual meta and economy: SuperHit mechanic, skins merge board with inventory, daily rewards and quests, kill streaks; upgrade economy and balance driven by Remote Config with A/B test groups.
- Helicopter boss fight with rockets and drones; Google Play Games sign-in and achievements.
- Performance optimization: projectile and boss-fight pooling, GC fixes and code refactoring; most frame hitches during and after levels disappeared.
- SDK and engine updates: Unity 6, Android API 36, Firebase, Unity IAP 5, AppsFlyer, Azur Games UCM 6.

Alien Horde: Squad Survival · 5K+ downloads

Unity developer

Midcore survivors-like squad action | Android | Feb – Oct 2025

- Built from scratch to Google Play release; most active of 6 programmers by code commits.
- Squad core: character factory, formations with baked positions, movement and selection, on the Zenject architecture.
- Enemies and three bosses (Claws, Mutant Slime, Striker) with Behavior Designer trees: charges, AOE, multishot, bouncing projectiles; elemental enemies.
- Save system with MemoryPack and cloud saves (Voxel Busters) via Play Games login.
- Animations, VFX and the whole audio integration for enemies and bosses; Addressables with Play Asset Delivery; Azur Games UCM SDK; UI.

Survive Squad · 10M+ downloads

LiveOps developer, then lead

Midcore survivors-like shooter / roguelike | Android, iOS | Oct 2023 – Dec 2025

- One of 3 programmers, then lead programmer when the team became 2; a live codebase taken over from the original studio.
- URP optimization for low-end devices: sprite shadows instead of real-time ones, simplified materials and VFX, FPS-driven quality switching; Xiaomi Mi A2 Lite went from 13–15 to 20–22 FPS.
- Features: chapters and checkpoints, spin-wheel rewards, a new hero with a turret ultimate, an alternative payment provider behind a purchase abstraction.

- Pooled audio system; migration to Unity 6; analytics, ads and attribution SDK updates; editor tools for builds and shaders.

Magic Friends – Color Hands · **10M+ downloads** — Sole programmer

Hybrid-casual physics action | Android, iOS | Sep 2022 – Dec 2023

- Sole programmer, working with a level designer and artists; full cycle from first prototype through release and LiveOps (versions 0.0.1 → 1.1.9).
- Hand mechanics on Obi Rope physics (stretch, wrap, pierce, fire, ice, thunder hands) and ragdoll enemies with PuppetMaster.
- Meta systems: craft lab, boosters, world map, islands with passive income, tutorials; remote-config feature flags and A/B tests.
- Ads, IAP and analytics: AppLovin MAX with several networks, Firebase, GameAnalytics, Adjust; Android and iOS release builds; mobile physics optimization.

Tortilla Game! Slap Challenge — Sole programmer

Hyper-casual | Android | Jul – Nov 2022

- Started the project: timing slap bar, rock-paper-scissors rounds, upgrades, cinematic cameras, game-loop UI, publisher SDK.

Ragdoll Flying Runner — Main developer

Hyper-casual | Android, iOS | Mar – May 2022

- Turned an earlier prototype into a runner: road generation, sword and ragdoll physics, prop spawner, weapon booster and shop, publisher SDK.

Diamond Land — Sole programmer

Casual 3D | Android (no longer on Google Play) | Feb – Jun 2022

- Started the project: procedural seed-based underground, digging and tree cutting, ground/underground camera switch, production machines, saves, analytics SDKs.

Plank PvP — Lead programmer

Location-based VR multiplayer shooter | PC VR, HTC Vive, SteamVR | Oct 2020 – Jan 2022

- Sole programmer from the first commit: LAN multiplayer on MLAPI with network discovery, rounds, score table, late join.
- Full-body avatars calibrated to Vive Trackers with FinalIK and synced over the network; calibration of physical planks and room to the virtual city.
- HyperBlaster guns with two-handed grip, drone enemies on Behavior Designer, HDRP lighting, LODs and occlusion culling for a stable 90+ FPS.

Boom.io – 3D Hero Battle Arena · **10K+ downloads** — Unity developer

Arena action | Android, iOS | Oct – Nov 2020

- Revive and win screens, coins panel and UI feedback animations.

My Cooking Idle · **10K+ downloads** — Unity developer

Idle tycoon | Android, iOS | Apr – Aug 2020

- Made the first commit; boosters and modifiers (including offline income), upgrades, IAP with subscriptions and VIP, localization, data-driven UI.

Crashy Cops 3D · **100K+ downloads** — LiveOps developer

Hyper-casual | Android, iOS | 2019 – 2020

- CPU/GPU profiling and optimization for low-end devices; refactored legacy UI and added content during LiveOps.

VR Shooting LBE — Unity developer

Location-based VR | PC VR, HTC Vive, SteamVR | 2019 – 2020

- Audio logic with Wwise; migration to SteamVR Input with custom bindings for Vive Trackers and HyperBlaster guns; laser-tag haptic vests; profiling and LiveOps features.

Capsule VR cinema — Sole developer

Location-based VR | PC VR, HTC Vive | Apr – Aug 2019

- Stereo VR video with a video switcher and 4-channel audio; Leap Motion hands and a Vive Tracker IK avatar; capsule visuals and shaders.

WebAR promo game (NDA) — Lead developer

Marker-based AR game, sports-drink brand | Mobile web | Autumn – Winter 2018

- Lead developer in a team of 3: core mechanics and controls in plain JavaScript and three.js (colleagues: UI, AR plugin optimization); launched from an AR marker in the mobile browser, no app install.

ROLLING GAMES · 2015 – 2018

Outsourcing studio: client projects for mobile, PC and location-based VR.

Ball Rush — Unity developer

3D runner | Android, iOS | Spring 2018

- The whole UI with animated effects; physics-based gameplay; parts of the Photon networking; analytics SDKs.

Apartments VR — Unity developer

Architectural visualization | PC VR, Android Daydream | Late 2017 – early 2018

- Cross-platform VR interactions and spatial UI; lighting and rendering setup for high visual quality.

VR Bus, VR Balloon — Unity developer

Location-based VR | PC VR, HTC Vive · Dubai Mall VR Park (Emaar) | Autumn 2017

- Bus trip and hot-air balloon rides, built in parallel with two other projects; cashier's control panel started each ride over LAN; barcode readers.
- Buttkicker shakers under the bus seats driven by the ride's audio for vibration.

Burj payment system — Unity developer

B2B desktop client | PC · VR Burj Khalifa attraction | Autumn 2017

- Standalone desktop client with barcode scanner integration and LAN sync with the main attraction software.

VRZoo — Unity developer

Location-based VR | PC VR, HTC Vive · Dubai Mall VR Park (Emaar) | Early 2017

- At launch, the top-earning attraction at Dubai Mall VR Park.
- VR interactions and spatial UI; inter-process protocol between the VR app, an external launcher and the payment system.

Elementix · 5K+ downloads — Unity developer

Puzzle | Android, iOS | 2016 – 2017 · two iterations, carried over to PamPam

- Grid-based puzzle logic, state transitions and UI.

RollerCoaster Tycoon World — UI developer

Theme park simulation | PC, Steam | 2015 – 2016

- Complex PC user interface screens.

7 Pin Pool — Unity developer

Mobile multiplayer pool | Android, iOS | 2015 – 2016

- Extended a third-party networking asset with custom game loops and UI.
- GameSparks and Photon for authentication and matchmaking.

Caveman Rush — Unity developer

2D runner | Android, iOS | 2015 – 2016

- Runner mechanics, obstacle spawning and UI for different aspect ratios.
